PROFILE

The new Park of Caspar Wittelplantsoen plays a central role in the perception of the surrounding neighborhood. It connects the new building of the Soesterkwartier Puntenburgerlaan along with the existing building and acts as a green meeting place for both old and new residents. The ambition is, in a relatively small area, to create an abundance of greenery. Here, the presence of a large amount of new trees and grassy plains are the basis for the design of the park..

概况

该项目位于一片住宅区之间，连接着 Soesterkwartier Puntenburgerlaan 街新建筑群和老住宅区，为新老居民提供了一片绿意盎然的休憩聚会之所。设计师希望利用有限的空间建造出一座绿都——大量新种植的树木和新培育的草坪构成了该项目的设计主体。

CENTRAL AREA

The grassy plains give the park a natural, intimate atmosphere and gives rise to the altitude between the central area of the Park Avenue and the Mondrian, one of the established principles in the urban plan. From a functional perspective, it is essential that the internal structure branches outwards. A clear path network provides both a good east-west connection from the station and the Soesterkwartier Eemcentrum. It creates a proper system that includes the houses located on the park side. The image of these compounds is varied. The curved paths in the east-west direction follow the existing relief while other paths carve through the terrain.

中心区域

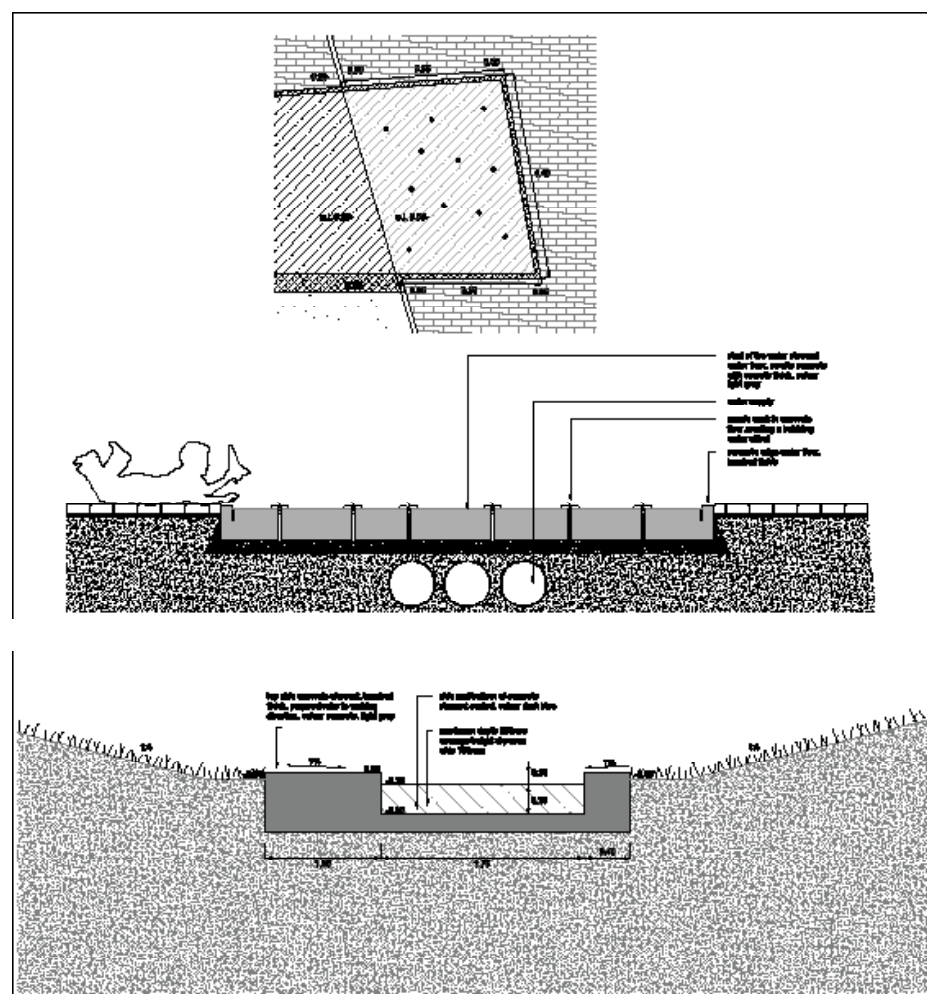

自然亲切的草坪缓缓上升至公园大道与蒙德里安之间的中心区域，它是城市规划遵循的既定原则之一。从功能的角度看，内部结构的外向性是必不可少的，清晰的路网从东到西将车站与 Soesterkwartier Eemcentrum 连接起来，打造了一个合适的系统，房屋倚园而坐，影像无常。

PLANTS

Scattered trees throughout the park highlight the desired relaxed atmosphere and will largely determine the identity of the park. Colour is added from the flowers in the main planting strips along the east-west connections. The variation in the selection of highlighted elements creates different areas and represents the annual seasonal experience.

植被

公园里的零星树木突显出理想的轻松愉快氛围，在很大程度上给公园作了定位。沿东西路网的主要种植带布满了多彩的花朵，如此不同区域采用不同的元素，给人季节性的体验。

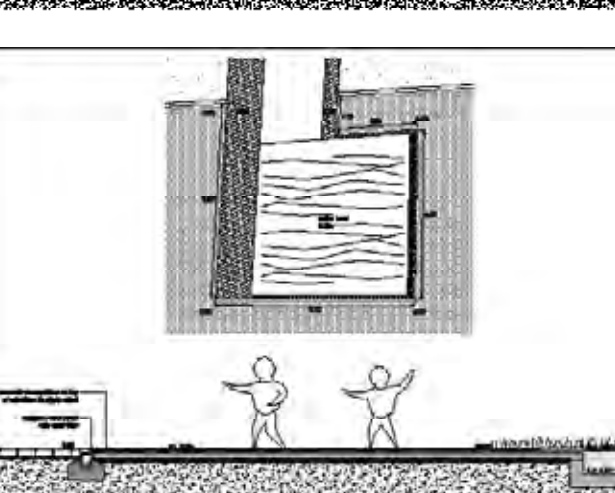

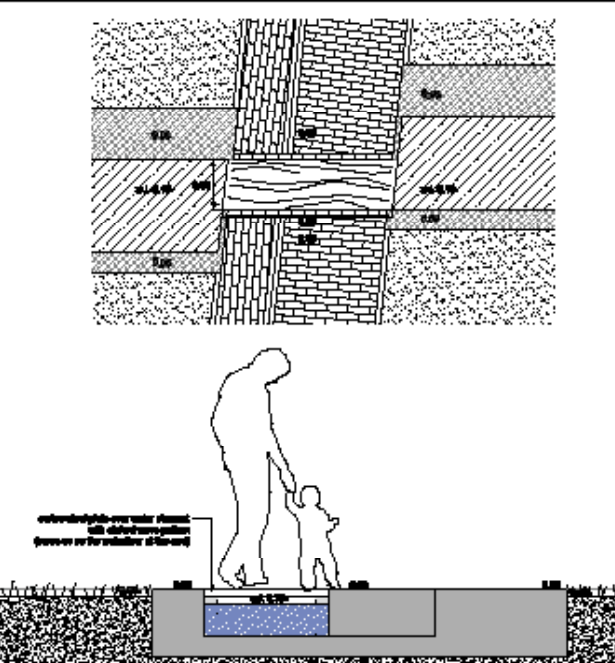

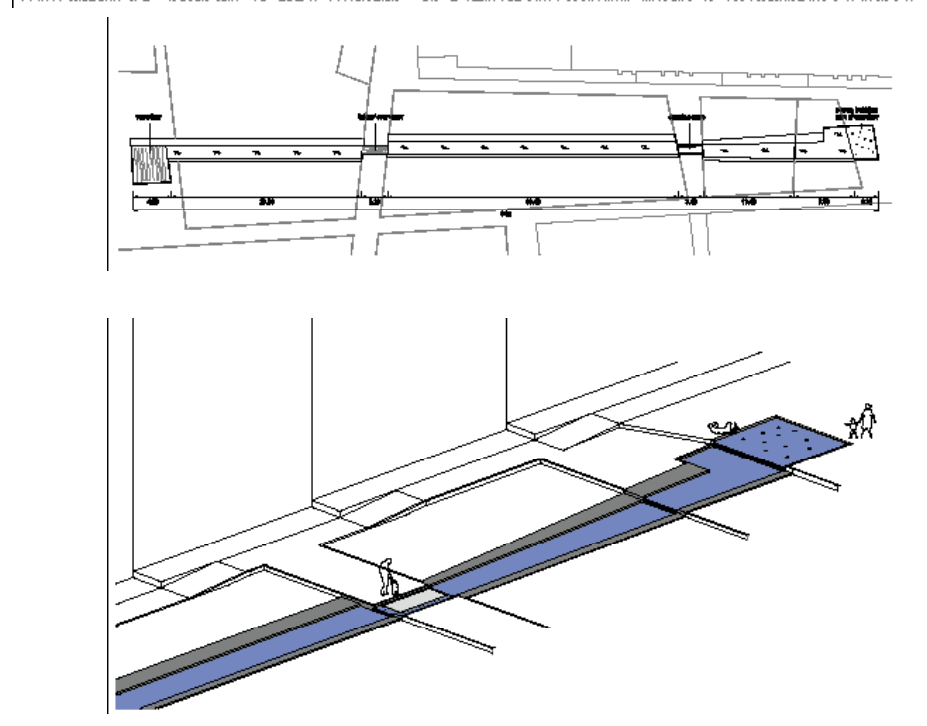

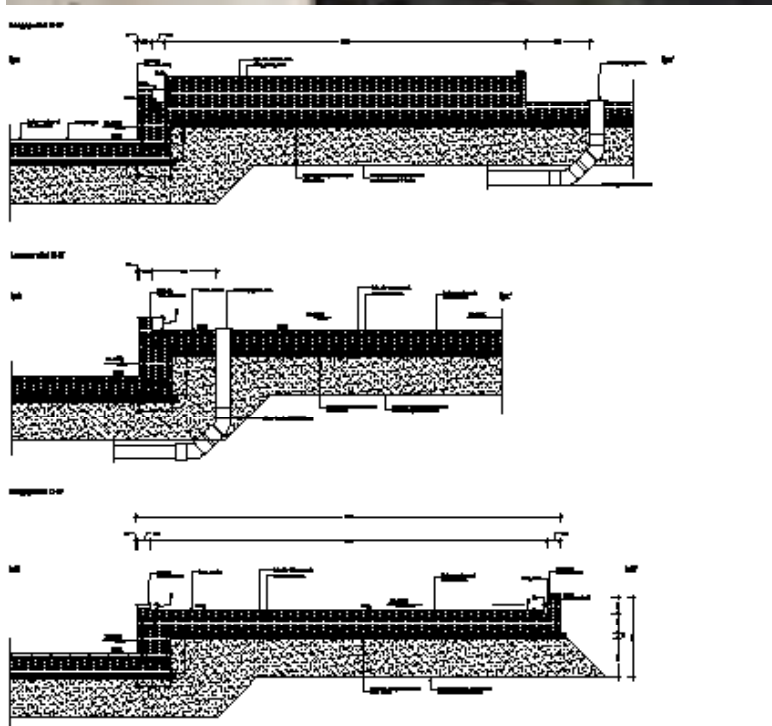

SHALLOW STRIP OF WATER

An important part of the park is a shallow strip of water between the central housing blocks. The water flows down through a number of treading water features. The water in the park gives the appearance of a prime location in which to live and relax and helps reflect the desired high quality and atmosphere of the new park.

浅水带

房屋间的浅水带是公园的重要组成部分，它为人们的生活休闲提供了一个绝佳去处，这也体现了设计师所寻求的高品质和新建设公园的特殊氛围。

MEETING PLACE

In line with the strip of water, is a meeting place that occupies a central place in the park. The area plays a central role in the establishment of the park. The entire park with its open central space, its grassy plains and water element calls for children to play and use their creativity and endless energy. For younger children play areas are created and decorated by using two existing objects from the Wittel-plantsoen.

会议场所

与浅水带保持一致的是占据公园中央位置的会议场所，会议场所在整个园区起着核心作用。整个园区与中央空地、草坪和水元素相得益彰，调动了孩童的玩乐天性、创造性和无穷活力。
